

Genomic Psychiatry

Table of Contents

Volume 1 • Number 3 • May 2025

EDITORIAL

The forgotten clockwork of the brain: Untangling accelerated aging in substance use disorders <i>Julio Licinio</i>	1
---	---

INNOVATORS & IDEAS: RISING STAR

Jeremie Poschmann: Data-driven discovery in human diseases through multi-omics profiling of the circulating immune system <i>Jeremie Poschmann</i>	3
---	---

INNOVATORS & IDEAS: RESEARCH LEADERS

Melissa Perreault: Thinking big towards a "complexity science" approach in neuroscience – systems, environment, and whole organism research <i>Melissa Perreault</i>	6
---	---

Anthony A. Grace: Elucidating the circuitries that underlie schizophrenia and depression may reveal the impact of stress during development and identify novel treatment targets <i>Anthony A. Grace</i>	10
---	----

Consuelo Walss-Bass: Why does my sister have schizophrenia and I do not? Understanding how a person's unique genetic makeup interacts with their environment to shape behavior is one of the final frontiers in medicine <i>Consuelo Walss-Bass</i>	13
--	----

VIEWPOINT

Recent findings and future directions for the intersection of genetic and environmental contributions to schizophrenia <i>Natassia Robinson and Sarah E. Bergen</i>	17
--	----

PERSPECTIVE

Indigenous data protection in wastewater surveillance: balancing public health monitoring with privacy rights <i>Melissa L. Perreault and Lawrence D. Goodridge</i>	22
--	----

THOUGHT LEADERS INVITED REVIEW

Translating stress systems: corticotropin releasing factor, its receptors, and the dopamine system in nonhuman primate models <i>Julie L. Fudge, Emily A. Kelly and Iman Mahoui</i>	28
--	----

RESEARCH ARTICLE

Deciphering the molecular basis of accelerated biological aging in substance use disorder: Integrative transcriptomic analysis <i>Bruno Kluwe-Schiavon, Laura Stertz ... Consuelo Walss-Bass</i>	44
---	----

Early infant white matter tract microstructure predictors of subsequent change in emotionality and emotional regulation <i>Yicheng Zhang, Layla Banihashemi ... Mary L. Phillips</i>	53
---	----

Cover Art

Insets with TH mRNA+ neurons in red, either single labeled, or co-labeled with VGluT2 (blue) and/or GAD1 (green) mRNA. Simple arrow = single labeled TH+ neurons, arrowhead = TH/VGluT2+ neuron, double arrowhead = triple labeled TH/VGluT2/GAD1 neurons (not all cells are labeled for simplicity). This cover image corresponds to Figure 6C in the paper "Translating stress systems: corticotropin releasing factor (CRF), its receptors, and the dopamine system in nonhuman primate models" by Julie L. Fudge et al. on pages 28–43 in this issue.
